

Naya matter

Front-End Developer (React/Next.js)

nayamatternaya@gmail.com | +963981401383 | Damascus-Syria | nayamatarportfolio.vercel.app

github.com/naya2matter | [@nayamatter](https://twitter.com/nayamatter)

Professional Summary

Front-End Developer specializing in React.js and Next.js, currently building internal platforms and client-facing web apps. Two years shipping production interfaces — marketing sites, admin dashboards, and an AI chat front end — with TypeScript and Tailwind CSS. Focused on accessible, responsive, reusable components and clean REST API integration.

Skills

Frontend Development: JavaScript (ES6+), TypeScript, React.js, Next.js, HTML5, CSS3, Responsive Design, Accessibility

State Management & Data: Redux, Redux Toolkit, Zustand, Context API, TanStack Query/Table, REST API integration

Styling & UI: Tailwind CSS, Bootstrap, Radix UI, GSAP, Framer Motion, Figma, reusable component libraries

Tools & Workflow: Git, GitHub, Vercel, Vite, npm, Postman, Chrome DevTools, code review, Agile teamwork

Professional Experience

Front-End Developer, NVT

As-Suwayda, Syria | 02/2026 – Present

- Build and maintain front-end features across several internal platforms (task/workspace management, an AI chat interface, and a company-wide learning platform) using React, Next.js, and TypeScript
- Built the front end of a multi-store operations dashboard covering QA/inspection checklists, scoring, and inventory counting workflows
- Developed a Manifest V3 Chrome extension that automates session hand-off between internal tools, replacing a manual copy-paste step
- Integrate REST APIs into typed React interfaces and implement role-based route guarding in the UI
- Collaborate with backend and design teammates to ship production features

Full-Stack Developer Intern, Vica Web Solution

Damascus, Syria | 11/2024 – 11/2025

- Built responsive, interactive user interfaces with React.js and Tailwind CSS
- Integrated REST APIs into React views and wired up full create/read/update/delete flows in the UI
- Built reusable component libraries used across multiple client projects
- Used Git/GitHub for version control and took part in team code reviews
- Deployed and maintained applications on Vercel

Education

B.Eng. in Information Engineering — Artificial Intelligence

Damascus, Syria | 09/2019 – 09/2023

Damascus University

Projects

FTT — Client Marketing Site + Admin Dashboard [🔗](#),

Next.js · TypeScript · Tailwind CSS · Radix UI · TanStack Table · Zustand · Zod

Marketing site for a training company with an authenticated staff dashboard behind it. Built the public pages, gallery, and multi-step application flow, plus dashboard tables with sorting and drag-to-reorder content. SEO handled at the framework level with generated sitemap and robots routes. Live: ftt-website.vercel.app

CVG — Agency Website + Custom CMS [🔗](#), *Next.js · TypeScript · Tailwind CSS · GSAP · Framer Motion · Zustand*

Construction agency site where every section is content-managed: nine independently editable page sections, each with its own dashboard editor. Built the scroll and reveal choreography with GSAP and a typed service layer over a shared HTTP client. Live: cvg.construction

Task System — Company-Wide Work Platform,

React · TypeScript · Vite · Tailwind CSS · dnd-kit · Zustand · WebSockets

Internal platform covering workspaces, projects, kanban boards, tickets, help requests, time clocking, and a weighted staff-rating system. Implemented drag-and-drop boards, real-time UI updates over WebSockets, and role-based permissions gating every route.

Courses — Learning Platform (Admin + Learner Apps),

React · TypeScript · Vite · Tailwind CSS · TanStack Table · TinyMCE · react-pdf · Zustand

Front end for the largest system I have worked on — roughly 500 source files across an admin console and a learner-facing app. Built admin screens for course, video, audio, quiz, evaluation, and user management, plus learner screens for enrolment, quizzes, progress tracking, and scheduling. Implemented a configurable attention-score UI with live preview and client-side PDF certificate generation.

Web2API UI — AI Chat Front-End, *React · TypeScript · Vite · AI SDK · React Flow · Shiki · Streamdown*

Chat interface for an internal AI gateway. Built token-by-token streaming with sticky-to-bottom scrolling, rich message rendering (syntax-highlighted code, math, and Mermaid diagrams), node-graph agent views on React Flow, and live token accounting against model context limits.
